Subject: Parchment

Ms. **(b) (6)** Thank you for your inquiry regarding the water being flushed from the Parchment system.

The water supply in Parchment and Cooper Township in Michigan, are contaminated with PFAS, so much so that they have issued warnings against consumption by humans, and animals. The officials are "flushing" the water system this weekend, BUT, they are flushing fire hydrants into the surrounding environment!! Like streams, creeks, etc!! How is this water not suitable for consumption, yet, it can be released into the environment???

Some of the initial flushed water may have gone out into the river. However, I've been told that the flushed water has been collected/directed to the Kalamazoo wastewater treatment plant.
